

Print at home Crack Gauge

Measure your cracks:

- Identify cracks that have these characteristics.
- Large cracks that start at windows, doorways or corners of buildings.
- Cracks are wider than 5mm.
- Cracks are jagged, horizontal or vertical zig-zagged, stepped in brickwork or follow mortar lines.
- Place the printed crack gauge against any visible wall cracks and measure the gaps. Use the pre-measured blue shaded areas below to measure the crack widths.

To assist, we recommend you note the areas of the cracks and take photos of the cracks gauge lined up against them. When you get in touch, let our customer service representative know and we will provide you with contact details to forward the photos to us.
